FIRST MIDTERM MOCK EXAM - SAMPLE 3

a) In the text below, you will read about botox. For blanks 1 to 5, choose the right verb form. For blanks 6 to 10, choose the right connector. _____/30

The creator of Botox never cared about wrinkles

Botox is formed by spores of the bacteria *Clostridium botulinum*. It [1] **finds / is found / was found** naturally in sediments as well as the intestinal tracts of some animals and fish. Botox essentially paralyzes the muscles for short periods as it blocks nerves from sending signals to the muscle to contract.

In the early 1970s, ophthalmologist Alan Scott was the first to discover that laboratory test monkeys [2] **responds / responded / was responded** well to botulinum toxin injections into eye muscles. He [3] **discovers / discovered / was discovered** that the paralysis of botulinum toxin [4] **confined / had confined / was confined** to the targeted muscle, it could last for a long time and had no side effects. Later, he tried an unprecedented way to help a patient who [5] **underwent / undergo / had undergone** three failed operations for double vision: He successfully injected a tamed form of botulism toxin into the patient's eye muscles.

[6] **After / Before / If** he had obtained the Food and Drug Administration's approval for a clinical trial, he did the initial human injections to treat strabismus in 1977. [7] **Therefore / As / If** the outcome was so successful, Scott became the father of Botox. He sold the rights to the pharmaceutical company Allergan in 1991, which developed the drug to smooth facial wrinkles. [8] **Therefore / However / As**, its popularity increased.

Botox is associated with looking good. [9] **Therefore / However / Besides**, Scott has maintained a strong interest in the non-cosmetic benefits of botulism-toxin injections. [10] **What's more / Therefore / However**, Scott's work has led legions of doctors to use the drug to treat everything from migraine headaches and chewing problems to drooling, hair loss and urinary incontinence.

Glossary: last (v): durar / undergo (v): someterse / tamed (adj): controlado / strabismus (n): estrabismo / smooth (v): alisar

b) Make Wh- Questions about the following extract. Underline the answers in the extract. _____/35

While most employers evaluate job candidates on their skills and experience, many companies are increasingly taking into consideration personality characteristics to determine whether a candidate is

a good fit. According to a survey from the Society for Human Resource Management, nearly 20% of employers say that they use some type of personality test as part of the hiring process.

In a new study published in 2022 in the journal *Perspectives in Psychological Science*, psychologists Paul R. Sackett and Philip T. Walmsley of the University of Minnesota analyzed several large data sets of hiring and job performance information to find out which personality attributes companies value most.

Sackett and Walmsley used a well-established model for measuring personality known as the Big Five as the theoretical basis for their study. In the Big Five model, an individual's personality can be described using measures of five personality traits: conscientiousness, agreeableness, emotional stability, extraversion, and openness to experience. The researchers analyzed a large set of data on job interviews to find out which personality traits companies look for when they're hiring.

86-95 points= 9	70-75 points= 7	56-65 points= 5	0-49 points= 2

KEY

Exercise A - 30 points

1. is found
2. responded
3. discovered
4. was confined
5. had undergone
6. After
7. As
8. Therefore
9. However
10. What's more

Exercise B - 35 points

(Sample answers. There may be other possibilities.)

While most employers evaluate [1] job candidates' skills and experience, many companies are increasingly using personality measures to determine whether a candidate is a good fit. According to a survey from the Society for Human Resource Management, [2] nearly 20% of employers say that they use some type of personality test as part of the hiring process.

In a study published [3] in 2022 in the journal *Perspectives in Psychological Science*, psychologists Paul R. Sackett and Philip T. Walmsley of the University of Minnesota analyzed several large data sets of hiring and job performance information to find out which personality attributes companies value most.

Sackett and Walmsley used [4] a well-established model for measuring personality known as the Big Five as the theoretical basis for their study. In the Big Five model, an individual's personality can be described using measures of five personality traits: conscientiousness, agreeableness, emotional stability, extraversion, and openness to experience. The researchers analyzed a large set of data on job interviews [5] to find out which personality traits companies look for when they're hiring.

1. What do most employers evaluate?
2. How many employers say they use some type of personality test as part of the hiring process?
3. When was Sackett and Walmsley's study published?
4. What did Sackett and Walmsley use as their theoretical basis for their study?
5. Why did the researchers analyze a large set of data on job interviews?

Exercise C - 35 points

Students' own answers.
